The phenomenom called Mercury Retrograde is this. Both the earth mercury □
revolve around the sun at different distances and different speeds. When □
observing mercury from the earth, mercury sometimes starts to "move
backwards" □
due to the movment of the two planets around the sun. This is called being
□
Retrograde also being aflicted. In traditional astrology this is often □
interperated as being "BAD" "NEGATIVE" and "DESTRUCTIVE". In the "modern"
□
approach we laern that it is a time where obstructions are more readily
seen □
and experienced (how is that for double talk?). Above all else remember □
William Shakespeare, "the fault is not in the stars, my dear Cassius, but
in □
ourselves." Sure a mercury retrograde is tough on communication but with a
□
little common sense and effort the "warning sign" of Mercury Retrograde is
□
delt with. The stars advise to trends and we are not slaves to trends.
Please note, this is only assumeing that the Heliocentric modle of the
solar □
system is ok, for those who hold differing world modles, I appologize.
